# Six Degrees of Data Separation

BRG professionals value and understand the data interconnectedness that spans across six key data-centric practice areas represented in the diagram below. Whether it involves investigating, managing, protecting, searching, analyzing, or organizing data, BRG's team of experts provides a holistic 360-degree approach in the work and services we provide to our clients.

## DIGITAL FORENSICS AND DATA LOSS PREVENTION (DLP)

BRG's experienced team delivers industry-leading services and expertise in digital evidence preservation, analysis, investigation, and expert testimony. We regularly handle complex, "bet the company" matters involving a variety of devices, accounts, and factual issues. We specialize in rendering clear and actionable advice to counsel, delivering compelling and convincing oral and written testimony, and assisting with deposition and cross-examination preparation regarding opposing experts. Much of our work centers around employee mobility and trade secrets cases, in which we also advise clients regarding how best to leverage their DLP resources and programs.

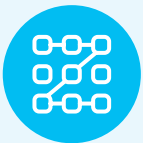

## DATA PRIVACY COMPLIANCE

More and more legislation across the globe and the US requires businesses to develop a principles-based data privacy program to better operationalize data privacy risk and compliance. BRG's team of data privacy and protection experts has the privacy, business, and IT know-how to help build a data privacy program, assess and remediate risk, maintain data and business process maps, improve employee awareness and engagement, conduct audits, and interface with regulatory authorities, state attorneys general, and outside attorneys. Depending on the needs of your business, we can provide support or serve as your outsourced privacy program officer, building it from the ground up and providing ongoing services to fulfill data subject requests, respond to potential data breaches, and manage the day-to-day requirements of maintaining compliance.

## eDISCOVERY SUPPORT

BRG professionals deliver a full suite of eDiscovery services, including collection, processing, hosting, managed review, and analytics, leveraging the latest, best-in-breed tools and technologies. In addition, our experts provide related advisory services such as RFP development and administration, program and playbook development, and assistance with technology implementations.

## DATA & PROCESS MAPPING

BRG provides expertise and professionals to lead a wide range of data and business process-mapping efforts to support an organization's obligations related to data privacy, eDiscovery, data classification, and information governance. Beyond compliance goals and objectives, BRG professionals view these initiatives as stimuli for the company to identify operational efficiencies and cost savings/avoidance opportunities.

## COMMERCIAL DATA GOVERNANCE

BRG professionals help guide an organization in its efforts to implement a federated or centralized data governance model to create actionable insights and streamline data flows and sources across the enterprise. Our team typically starts with a data-mapping exercise for the customer acquisition process for the sales function within the commercial organization. At the same time, our team will develop and establish a "playbook" of future-state process, roles and responsibilities, purchased data strategies, data, and dashboard blueprints for the company as it embarks on its data and reporting transformation project.

## RECORDS MANAGEMENT AND DATA CLASSIFICATION

BRG's experienced team of information governance experts delivers industry-leading services to help organizations meet regulatory obligations in the areas of records management and retention related schedules, policies and procedures, email management, etc. Equally important, BRG professionals believe developing a streamlined data classification program establishing the standards and data handling of secret, confidential, internal and public is material to protecting the organization's most important data assets.

## MICHAEL BANDEMER

[mbandemer@thinkbrg.com](mailto:mbandemer@thinkbrg.com) | 619.823.8867

Mr. Bandemer is a testifying expert who has performed or supervised the preservation, forensic collection, and analysis of electronically stored information from corporate networks, databases, personal computers, phones, tablets, external storage devices, social media, archives, cloud providers, and other digital storage media in hundreds of matters ranging from internal and federal investigations to commercial disputes. He advises both corporate and law firm clients and provides expert testimony regarding various information management, data security, and legal technology issues including internal processes, policies and procedures, best practices, evidence preservation and collection, computer forensics, eDiscovery, complex data analytics, and other information technology issues.

## ANDY CRAIN

[acrain@thinkbrg.com](mailto:acrain@thinkbrg.com) | 415.640.3385

Mr. Crain provides expert witness and strategic consulting services to law firm and corporate clients in the areas of computer forensics, investigations, eDiscovery, and litigation support. Licensed in California as both an attorney (inactive) and private investigator (active), he has assisted clients with a wide variety of consulting engagements. His case experience includes areas such as theft of trade secrets, spoliation of evidence, internal investigations, employment disputes, government/regulatory inquiries, and fraud. He has provided expert testimony in declarations and depositions and at trial. He has served many times as a neutral computer forensics examiner, either by court appointment or stipulation.

## ROBERT HICHENS

[rhichens@thinkbrg.com](mailto:rhichens@thinkbrg.com) | 512.969.8214

Mr. Hichens has considerable experience in corporate IT and information governance-related consulting, with a focus on the strategic utilization of technology and the improvement of employee engagement and motivation through culture campaigns and programs. His background brings together the disciplines of technology, business, change management, and law, allowing Mr. Hichens to deliver a wide range of information governance, insider data theft protection, data privacy, and eDiscovery consulting services. His extensive experience crosses almost all industries, including energy, manufacturing, pharmaceutical, aerospace, consumer products, and financial services.

## AMY WORLEY

[aworley@thinkbrg.com](mailto:aworley@thinkbrg.com) | 704.806.6542

Ms. Worley has extensive experience helping companies across industries build and implement programs that unlock and protect the power of information as a competitive advantage through strategic information governance, privacy-by-design, trade secret and commercially sensitive information identification and classification, data loss prevention, data and business process mapping and risk analyses, strategic data analytics, and IT contracting. She has deep industry experience building effective and sustainable multinational privacy and records management programs from gap identification through audit and ongoing program management.

## About BRG

Berkeley Research Group (BRG) is a global consulting firm that helps leading organizations advance in three key areas: disputes and investigations, corporate finance, and strategy and operations. Headquartered in California with offices around the world, we are an integrated group of experts, industry leaders, academics, data scientists, and professionals working beyond borders and disciplines. We harness our collective expertise to deliver the inspired insights and practical strategies our clients need to stay ahead of what's next.
